

Y-12 INNOVATION COMPETITION

Available to all entrepreneurs, web designers and software developers throughout the region, this competition is for those interested in developing a beta of a commercially-viable product or business concept based on technologies available from the Y-12 National Security Complex technology portfolio. Participants will receive feedback from The Enterprise Center and a panel of experts. The ultimate winner will receive \$2,500 in cash and additional business assistance for the development of a potential startup company.

AVAILABLE TECHNOLOGY

While competitors may develop a business plan based on any Y-12 technology, the competition will also include software technologies such as IR3AM and EVALUATE.

EVALUATE (Extreme Value Analytical Logic Utilized for Advanced Trend Examination) analytically evaluates a group's characteristics to determine the group's behavior. The intended use of the technology is to predict when a change in behavior is beginning to occur, so that the software user can respond to the anticipated new trend in a timely manner.

IR3AM (Integrated Route, Risk, Resource, Analysis and Allocation Model) is a decision support and probability-based analysis tool that will evaluate transportation over a selected time interval and determine the allocation of resource and manpower assets to best alleviate risk.

EVENT DETAILS

WHEN: December 6, 2013 at 10 a.m.

WHERE: Business Development Center, 100 Cherokee Blvd, Chattanooga, TN 37405
